Intended Nationally Determined Contribution (INDC)

INDC
Maroc

Vision

To ensure Morocco's territory and society are more resilient to climate change while rapidly transitioning to a low-carbon economy

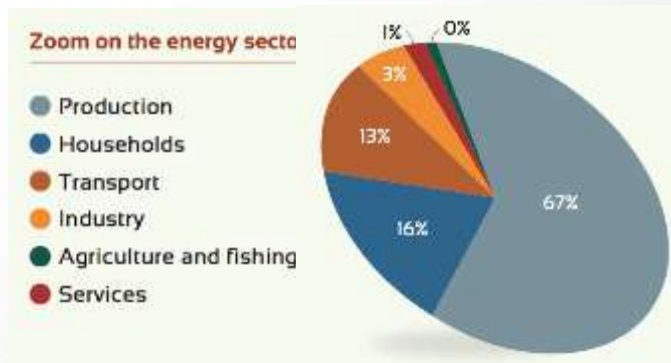

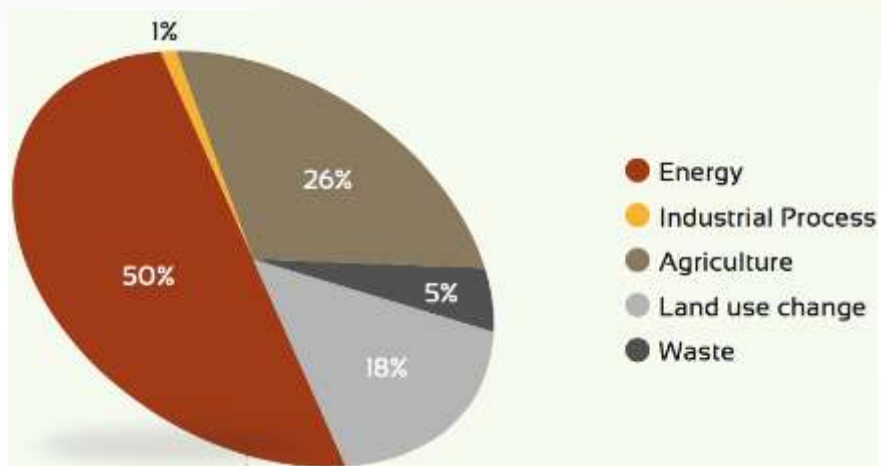

A participative process

1. 2 years of work on the Third National Communication
2. Launch of the INDC process – January 2015
3. High-level validation by an inter-ministerial committee – May 2015
4. National Climate Change Conference - June 2, 2015

Economy-Wide Targets Driving an Energy Sector Transformation

Mitigation Strategies and Actions Plans

- National Energy Strategy
- Morocco Green Plan
- National Waste Recovery Program
- National Liquid Sanitation and Wastewater Treatment Programme
- Preservation and Sustainable Forest Management Strategy

Economy-wide mitigation targets

-13%

by 2030 compared to BAU

Unconditional target

-32%

by 2030 compared to BAU

**Conditional target subject to support
from the international community**

More than 50% renewable energy by 2025

Energy savings of 15% by 2030

Substantial decrease in fossil fuel subsidies

Substantial increase in use of natural gas

Goals of adaptation actions

- Protect its **population**
- Protect **cultural and natural heritage**
- Protect **production systems** that are vulnerable to climate change

Adaptation Strategies and Action Plans

- Desalination of 285 million m³/year of drinking water supply to several cities and centres;
- Substitute 85 million m³/year of water withdrawal from overexploited aquifers to surface water
- Save 2.8 billion m³/year of irrigation water
- Build 38 new dams and develop an inventory of all sites vulnerable to flooding; treat all vulnerable sites
